Summary

Motivated and detail-oriented Software Engineer with strong foundational experience in backend development, cloud platforms, and modern DevOps practices. Proven ability to design and build scalable, reliable APIs and services using .NET, C#, and AWS. Experienced in CI/CD automation, scripting, and production-grade systems through internships and real-world projects. A fast learner with a passion for solving complex problems, writing clean code, and contributing to high-impact engineering teams.

Technical Skills

- **Languages and Scripting:** C, C++, C#, Java, Python, HTML, CSS, JavaScript, Jython, Dart
- **Database:** MySQL (RDBMS), SQLite3, MSSQL Server
- **Web Services:** Google Firebase, AWS, Shopify, Twilio, Postmates, Zapier
- **Software:** Power BI, Ignition, Studio 5000, Factory Talk Machine Edition, Flutter, Android Studios
- **SDLC Tools:** Visual Studio Code, Postman, CI/CD, Jira, BitBucket, SourceTree, Bamboo, Git, PowerShell.

Education

- **Master of Science, Computer Science (GPA: 3.7/4.0)** **Aug 2022 – May 2024**
University of Central Florida, Orlando.
Relevant Coursework: Design and Analysis of Algorithms, Malware and Software Vulnerability Analysis, Advance Database, Advance CN, Computer Architecture, Advance AI, VR, AR, Realistic Realtime rendering.
- **Bachelor of Engineering, Computer Science, Mumbai.** **Aug 2018 – May 2022**
A.P.Shah Institute of Technology, Mumbai University.
Relevant Coursework: Analysis of Algorithms, OOPS, DBMS, Computer Networks, ML, Microprocessors, NLP

Experience

- **Software Engineer, Softsmart Consulting** **Oct 2024 – March 2026**
 - **Software Engineer, Department of Health Care Services (Remote)** **September 2025 – March 2026**
Modernize a solution to enforce health practitioner sanctions through insurance provider network in the State of CA. Designed and developed SharePoint Online list views, Nintex workflows, and Power Automate Flows to curate/publish sanctions in monthly cadence, collect auditable record of managed care plan reviews, and back-office reporting.
 - **Software Engineer, The Walt Disney Company (Remote)** **March 2025 – September 2025**
Architected and deployed an end-to-end automated workflow pipeline to transform raw data into comprehensive reports, achieving a drastic reduction in processing time from two weeks to under a minute. This optimization significantly enhanced scalability and operational efficiency. Collaborated closely with cross-functional teams to streamline data ingestion, processing, and reporting, ensuring seamless integration with existing systems.
 - **Software Engineer, EMC Insurance (Remote)** **Oct 2024 – March 2025**
Developed RESTful .NET APIs for a B2C Quote & Buy portal, facilitating small and medium-scale businesses in purchasing business insurance policies online with instant underwriting. The APIs follow layered architecture which are hosted in AWS Lambda and the structured data is hosted in Amazon RDS. Provided orchestration with Guidewire and other APIs.
- **Controls Intern, Arizona Beverages, New Jersey** **May 2023 - August 2023**
Gained hands-on experience on MES and beverage manufacturing automation. Used Ignition Vision for development of a new user signup screen and HMIs in thermoprocess and blender applications. Designed statistical dashboards with Ignition Perspective for analysis. Set up a palletizer control panel and collaborated with control engineers to troubleshoot automation.
- **Global Leadership and Entrepreneurship Intern, Upkey, Chicago (Remote)** **May 2020 – July 2020**
Created a functional proof of concept for Daymaker in the Capstone project, implementing UX/UI design on the Shopify platform for a seamless gift purchasing experience. Managed backend development, integrating Shopify with APIs (Google Firebase, Twilio, Postmates) through Zapier.

Projects

- **APT - Your Personal Trainer** **Sep 2021 – April 2022**
A mobile app that uses the device camera for pose estimation and live repetition counter implemented using ML models.
- **Speech Emotion Recognizer** **Spring 2021**
Created a machine learning model that utilizes pre-recorded audio to self-train on extracted data like pitch, tone, and jitter. For this I employed a CNN model with hidden layers to process these features, ensuring maximum accuracy.
- **Branch Prediction using Neural Networks** **Spring 2023**
Explored challenges in branch prediction, proposing solutions like Variable Length Branch Prediction and machine learning algorithms. Analyzed baseline models (Smith, Bimodal, Gshare, Hybrid) alongside neural networks (Perceptrons, 1D Convolutional, Recurrent Neural Networks), highlighting RNN's superior performance. Demonstrated neural network approaches' effectiveness over traditional models using Apple M1 and M2 chips in experiments.

Certifications

- Scrum Fundamentals Certified (Dec 2025, Credential ID: 1132725)
- Microsoft Certified: Azure Administrator Associate (Jan 2025, Credential ID: 8DB6A9B9C564E8FC)
- Microsoft Certified: Azure AI Fundamentals (Jun 2024, Credential ID: CE738A8971A70BBF)
- Microsoft Certified: Power Platform Fundamentals (Sep 2024, Credential ID: 54E25FB4855B2DC7)
